

Discover: Food Chains

Producer

Consumers

Energy flow > > > > > > > > > > > > > > > > >

All life needs food to stay healthy and grow. Food is where creatures get their **energy** from. Most plants get their energy from the sun - they are **producers** of energy. The energy plants produce flows through the food chain. The Caterpillar is eaten by the Great Tit, the Great Tit is eaten by the Sparrowhawk. The caterpillar, Great Tit and Sparrowhawk are called **consumers**.
